## PROFESSIONAL SUMMARY

Web developer and growth-focused technical operator with hands-on experience building production websites, improving search visibility, connecting analytics and lead systems, and turning ambiguous business problems into practical technical solutions. Strong across React, Next.js, TypeScript, WordPress, SEO, analytics, APIs, CRM-style workflows, automation, and AI-assisted development. Brings roughly 20 years of real-world experience around trades, construction, automotive, fleet, equipment, and service businesses, with a practical understanding of how customer acquisition and operations connect.

## SELECTED IMPACT

- More than doubled organic Google Search clicks for a local excavation contractor, growing from about 40 to 90+ clicks per rolling 28 days between March and August 2026.
- Increased Google Business Profile website clicks 76% year over year through local SEO, service-page strategy, website improvements, and stronger search visibility.
- Built service-specific search visibility across non-branded commercial queries and captured point-in-time visibility in Google local, organic, and AI-generated search results.
- Used attribution and call data to uncover a major downstream lead-handling gap, shifting the growth problem from traffic generation toward CRM, call handling, follow-up, and revenue operations.

## CORE CAPABILITIES

|                      |                                                                                                                                                                  |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Web & Software       | React, Next.js, TypeScript, JavaScript, Node.js, HTML, CSS, Tailwind, SCSS, WordPress, Sanity, APIs                                                              |
| Growth & Search      | Technical SEO, local SEO, search intent, service-page strategy, Google Business Profile, landing pages, Google Ads support                                       |
| Analytics & Systems  | GA4, Google Search Console, HubSpot CRM / Sales Hub, conversion tracking, attribution, lead capture, CRM workflows, call tracking, Google Sheets API, automation |
| Quality & Operations | Playwright, GitHub Actions, production monitoring, deployment, DNS/hosting, performance optimization, troubleshooting, AI-assisted development                   |

## EXPERIENCE

### Digital Systems & Web Developer — Bellhouse Excavating

2022 – Present  
Brantford / Paris, ON

- Built and maintain the company’s production Next.js website and digital acquisition foundation, working independently in an environment with limited formal marketing infrastructure, assets, and direction.
- Created service and location page architecture around real customer search intent, improving visibility for excavation, pond work, hauling, demolition, foundation work, grading, and related commercial services.
- Grew organic Google Search clicks from about 40 to 90+ per rolling 28 days between March and August 2026 and increased Google Business Profile website clicks 76% year over year.
- Implemented secure contact and lead-intake workflows using server-side logic, email delivery, reCAPTCHA, structured submissions, analytics, attribution concepts, and Google Sheets API support.
- Analyzed lead and call performance and identified a significant lead-handling gap, then expanded the solution toward CRM structure, notifications, reminders, call tracking, and follow-up automation.
- Added automated end-to-end testing with Playwright and GitHub Actions plus production monitoring for site health, contact workflows, email delivery, SSL expiry, and operational failures.

### Founder / Web Developer — ALL8 Webworks

2023 – Present  
Remote

- Build and maintain websites and digital systems for service businesses with a focus on lead generation, search visibility, conversion, reliability, and practical business outcomes.
- Develop responsive Next.js / React / TypeScript experiences, reusable page systems, CMS-driven content, forms, integrations, analytics, email delivery, and deployment infrastructure.
- Translate business goals into positioning, landing pages, service structures, SEO strategy, lead-capture workflows, and technical improvements instead of treating the website as an isolated deliverable.
- Use AI-assisted development workflows with final review and production control for coding, debugging, refactoring, research, documentation, and implementation planning.

### Web Developer & SEO Specialist — Assure Alert / Independent Life Systems

2023  
Canada

- Improved an existing WordPress website through technical SEO, on-page optimization, internal linking, content updates, caching, image optimization, and page-level performance tuning.
- Configured analytics and SEO tools, embedded third-party forms, and improved landing-page structure and lead-capture paths to support inbound customer interest.

## SELECTED PRODUCT & TECHNICAL WORK

### Estivor — Contractor Estimating & Workflow Platform

Trade-focused SaaS product combining estimating, bid/proposal workflows, CRM concepts, AI assistance, integrations, and lead/follow-up systems. Built around real contractor workflows and simplified for non-technical users.

### ScoutChase — AI-Assisted Prospecting & Sales Workflow

Product concept and implementation focused on prospect research, qualification, simple CRM stages, outreach workflows, automation, and an intentionally simple interface for non-sales users.

### PluralPost — Archived CMS Platform

Custom React / Node.js / MongoDB CMS and publishing system with reusable content models, protected workflows, admin interfaces, and full-stack architecture.

## CERTIFICATIONS

- HubSpot Sales Hub Software Certification — HubSpot Academy · Aug 2, 2026 – Sep 1, 2027

## EARLIER INDUSTRY BACKGROUND

Licensed 310S Automotive Service Technician with extensive earlier experience in automotive, fleet, equipment, trades, construction, excavation, and service-business environments. This operating background informs how I design software, websites, workflows, and customer-acquisition systems for real businesses.

## EDUCATION & PROFESSIONAL DEVELOPMENT

Self-taught web developer with continuous hands-on production experience and ongoing professional development across software engineering, SEO, analytics, CRM / RevOps, automation, AI workflows, and business systems.
